

Azargata nitrogen fertilizer is a combination of nitrate, ammonium, and urea with sulfur, which provides the best conditions for the vegetative growth of plant products. This product can be used for all crops, gardens, and greenhouses. This compound is an inhibitor of the nitrification and nitrogen stabilization process and makes nitrogen more durable in the root environment. This fertilizer also has a slow-release property and causes the gradual release of nitrogen in the root environment, this capability allows the use of this fertilizer before planting crops without worrying about the stabilization of the elements. The presence of sulfur in this fertilizer, increasing nitrogen uptake, decreases the pH of the root environment, and is suitable for alkaline soils.

## Unique properties

- ✓ Fast supply of nitrogen required by the plant
- ✓ Improving the chemical properties of soil
- ✓ Improve root development and help balance the elements in the root environment
- ✓ Local decrease of pH of root environment and increase of absorption of elements

## AZARGATA NS 2705

During vegetation growth:  
Fertigation: 20-30 lit/ha  
foliar application: 2lit/1000 lit  
All crops (orchards,green house,cultivation)

This fertilizer is not on the list of hazardous and flammable substances, to keep it, the lid of the container should be closed and kept out of reach of children. In case of contact with skin and eyes, rinse immediately with plenty of water.

NS2705 fertilizer can be mixed with most fertilizers, but before mixing, it should be tested on a small scale.

| Analysis | W/W %    |
|----------|----------|
| Total N  | 28       |
| N-NH4    | 7        |
| N-No3    | 7        |
| N-NH2    | 14       |
| sulphate | 5        |
| pH       | 4-6      |
| Density  | 1.3 kg/l |
